Enrollment Trend Reports

Enrollment trend reporting uses campus-wide class data and displays it in a drill-to-detail format that allows you to see the overall trend of a course. By selecting multiple subjects, you also have the option to compare enrollment data across course offerings.

The report shows the number of students enrolled in a class for a term(s), their academic level, and their academic career. The data is intended for use as a historical data analysis tool in course demand planning, not to determine current registration counts before the start of a term.

The Total Enrollment Report

Use this report to view the total number of students enrolled in the course(s) specified in the Criteria Bar (Term, Subject, and Catalog Number).

This report also offers links to detailed information about the academic levels and careers represented.

Enrollment Variance Graphs

You can change the report to show enrollment variance graphs. Enrollment variance is the difference between the total number of students enrolled and the enrollment capacity established for a course.
These reports are useful to Deans, Curriculum Managers, and Curriculum Maintainers for viewing enrollment trends that assist with course demand planning. Access is automatically granted to those with "Dean" in their title, as well as staff/faculty with one of the following M-Pathways roles:

- SR Curriculum Viewer.
- SR Enrollment Request User.
- SR Enrollment Request Viewer.
- SR Class Maintainer.

Users who are not auto-granted but who have a business need to view these reports can request access to Enrollment data in M-Reports via the Online Access Request System (OARS). The M-Reports role associated with this capability is **EnrollmentTrends**. Unit Liaisons (UL) approve and authorize requests.
